

What Would You Do If You Had A Year To Live? A Cockroach's Story: Gregor Lives!

Group 11

Jonathan Grubb
Grant Jochem
Wendy Myren
Katie Reiswig

Cockroaches only live for about a year.

Cockroaches spend 75% of their time resting...Therefore Gregor was not dead, only napping!

“His opinion about the necessity for him to disappear was, if possible, even firmer than his sister’s”

Page 49.

An apple a day keeps the doctor
away... for humans anyways!

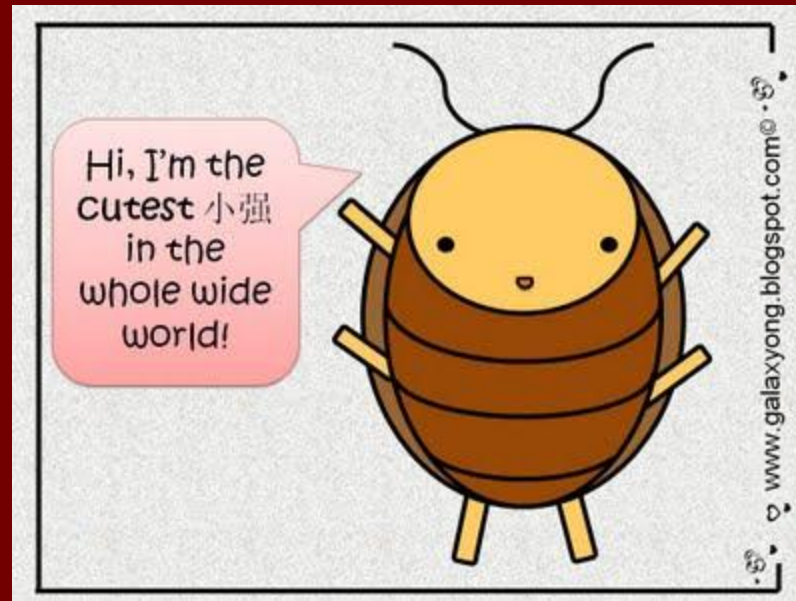

Cockroaches prefer warmer tropical climates.

Cockroaches prefer to live in a warm dark building.

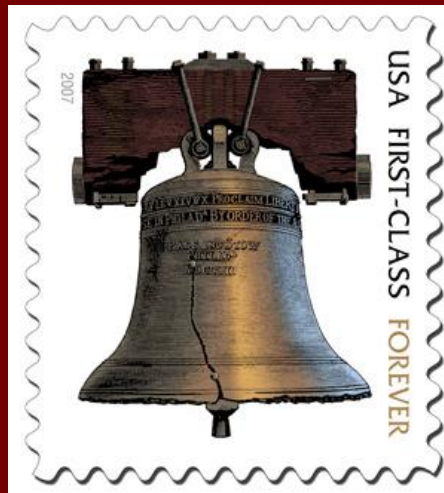

They are nocturnal! Cockroaches
hate light.

Cockroaches have symbiotic relationships with protozoans and bacteria.

These bugs are very resilient. They can eat the glue off postage stamps as a food source.

The cockroach's natural predators are: wasps, house centipedes, and certain chemicals (pest control).

Cockroaches are the fastest running insects! (3 mph)

They are omnivores. Although they don't eat often, cockroaches will eat practically anything. (They like the taste of beer!!)

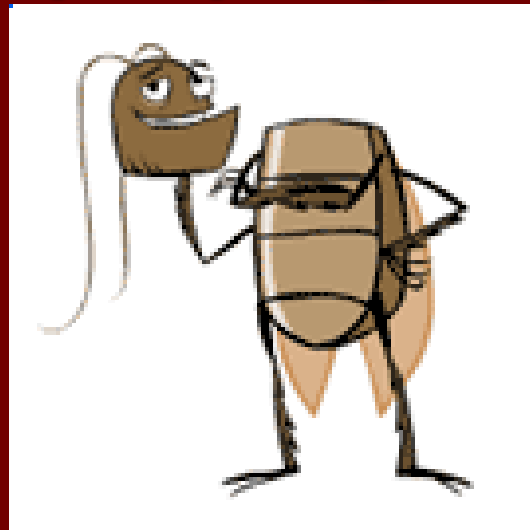

Cockroaches only have 10 second memories.

Cockroaches have medicinal value.
They have been used to cure
illnesses and physical disorders for
centuries.

Cockroaches can live 9 days without their head – only eventually dying from thirst.

KAFKAESQUE!!!!
